### 4.3 Vulnerability

There are few significant threats to the qualifying interests at present. Part of the site is a National Nature Reserve managed for its natural heritage interest. In this area a Management Agreement is in place which allows for positive management via a twin programme of ditch-blocking and scrub removal, thus redressing damage caused by drainage in the past. This approach is also being pursued over the remainder of the site, and under the SNH National Nature Reserve Review it is intended to increase the area of the site within the NNR. There is a peat-extraction consent adjacent to Offerance Moss SSSI, which runs until August 2003, after which any application for renewal will be considered by Stirling Council; and the implications for the site will be considered by SNH.
